DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,416,837.

The reference discloses a phase-change recording medium where the recording layer is formed of a Ge-Bi-Te material having at least one of Sn, Al or In added thereto. See col. 15, lines 57-59. The medium may be a single or double sided medium. See Figures 2 and 3. The medium includes dielectric layers on either side of the recording layer, compensation layer and a reflective layer in the thickness ranges claimed. See Example 9 and Table 6. The medium is recorded/read with a wavelength in the claimed range (415 and 660nm). See Examples 15 and 22. It is recognized that the reference does not specify the ratios of the materials in the recording layer as claimed. However, as the same materials are disclosed, it would have been obvious to one of ordinary skill in the art to vary the amounts of the elements in the interest of optimizing the optical and physical properties of the layer.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined

Art Unit: 1794

application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-32 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 38 of U.S. Patent No. 6,416,837. Although the conflicting claims are not identical, they are not patentably distinct from each other because they cover the same recording medium comprising a phase-change recording material of GeBiTe with Sn, Al and/or In added thereto. It is recognized that atomic percentages of the phase-change material is not specified. However, it would have been obvious to vary the amounts of the elements in the layer in the interest of optimization.
